New Publications.

Apprentice, a New American Encyclopedia.

Kindly by George H. Boye and Charles A.

Volume 4 of this work, no creditable

as an "American book," has just been issued

by the publishers, and is ready for delivery

in its 762 pages of matter, and a copy

in which will be found exceedingly good

and useful information.

This volume has been justly characterized

as "the best for practical use ever pub-

lished. With exception of the elaborate

scientific treatise, it contains quite as much

matter as the Encyclopedia Britannica, and

and the greatest work of the kind in the

world." The biographical and geographical

structure is more complete than in the American

work and is more correct. Every

thing in the shape of more valuable and "up-

to-date" facts, is a sample page, being

filled with the most complete information, every

fact and clearly arranged so as to present an

adequate view of the subject treated, and in

the smallest space possible. The

bringing all this knowledge which in this age

of scientific progress and development can be

brought to bear in the education of any given

subject, the work will be a standing monument

to the ability of the Union's writers of the

day, and will continue to stand upon the

educational talent engaged in its arrange-

ment and up to the time that we shall be

in its possession. Every American has

reason to be proud of it.

The Fourth Volume of the series of the

work has been published by the

publishers, and is ready for delivery

in its 762 pages of matter, and a copy

in which will be found exceedingly good

and useful information.
